EDUCATION

Multimedia University (MMU), Cyberjaya

Jul 2022 – Present

B.Sc. (Hons.) Computer Science — Software Engineering Specialization

CGPA: 3.39 / 4.00

- Relevant coursework: OOP, Data Structures & Algorithms, Software Testing, Software Maintenance, Web Development, Database Systems, Machine Learning

WORK EXPERIENCE

Boolland Digital

Jul 2025 – Nov 2025

Frontend Developer Intern (Shopify)

Kuala Lumpur, Malaysia

- Customized Shopify storefronts for multiple client brands using Liquid, JavaScript, and SCSS within a 3–5 developer team, contributing to live production stores.
- Built custom sections, blocks, and theme schema settings on the Dawn theme — enabling non-technical clients to manage page content independently.
- Integrated third-party Shopify apps and resolved cross-browser styling and interactivity issues across desktop and mobile breakpoints.

PROJECTS

E-Commerce Customer Retention System — Final Year Project

2025 – 2026

Django • React • PostgreSQL • LightGBM • XGBoost

- Built a full-stack platform helping SME e-commerce businesses identify and retain at-risk customers via automated RFM segmentation (Champions, Loyal, At-Risk, High-Risk, Churned).
- Trained and benchmarked LightGBM and XGBoost churn-prediction models on real merchant datasets (AUC up to 0.7389) and integrated the pipeline into the Django backend.
- Implemented 20+ screens across 3 user roles (admin, merchant, analyst); defined full architecture — UML use cases, ERD, REST API layer, and ML training/inference pipeline.

Billing & Invoicing System — Client Project

2025

React • Django • SQLite

- Designed and built a production-ready full-stack billing system for a small family-run business, covering invoicing, customer management, and payment tracking end-to-end.
- Implemented automated PDF invoice generation and one-click WhatsApp delivery, plus a dashboard with revenue trends and outstanding-payment reports.
- Built role-based access for owner and staff; gathered requirements directly from the business owner and iterated through multiple UI revisions.

Internal Recruitment Management System — Glory Sports Swimming Institution

Late 2025 – Present

React • Vite • Django • PostgreSQL • Offline tablet-kiosk LAN deployment

- Designing an internal HR system deployable as an offline tablet kiosk on the company LAN — candidate portal, PIC dashboard, offer letter generation, IC document scanning, and new-hire onboarding.
- Working directly with the director (alongside part-time staff role at the institution) to gather requirements, scope features, and iterate on designs across multiple user roles.

PUBLICATIONS & AWARDS

Say, S. T., Nyew, E. T., et al. *E-Commerce Customer Retention Management System Using RFM Behavioural Analytics and Gradient-Boosted Churn Prediction*. Presented at the 6th International Conference on Computer, Information Technology & Intelligent Computing (CITIC 2026), held with DIFCON 2026, Multimedia University, May 2026.

- **Best Presenter Award** — CITIC 2026, awarded for the above paper presentation (May 2026).

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C++, SQL, HTML, CSS / SCSS, Liquid

Frameworks & Libraries: Django, React, Vite, Flask, Flutter, jQuery

Machine Learning & Data: XGBoost, LightGBM, scikit-learn, pandas, RFM segmentation, feature engineering

E-Commerce & Tools: Shopify (Liquid, theme schema, sections, app integration), PostgreSQL, SQLite, MySQL, Git/GitHub, Figma, Postman
