## EDUCATION

### Multimedia University (MMU), Cyberjaya

Jul 2022 – Jul 2026

*B.Sc. (Hons.) Computer Science — Software Engineering Specialization*

*CGPA: 3.39 / 4.00*

- Relevant coursework: OOP, Data Structures & Algorithms, Verification & Validation, Software Evolution & Maintenance, Web Development, Database Systems, Machine Learning

## WORK EXPERIENCE

### Boolland Digital

Jul 2025 – Oct 2025

*Frontend Developer Intern (Shopify)*

*Kuala Lumpur, Malaysia*

- Customized Shopify storefronts for multiple client brands using Liquid, JavaScript, and SCSS within a 3–5 developer team, contributing to live production stores.
- Built custom sections, blocks, and theme schema settings on the Dawn theme — enabling non-technical clients to manage page content independently.
- Integrated third-party Shopify apps and resolved cross-browser styling and interactivity issues across desktop and mobile breakpoints.

## PROJECTS

### E-Commerce Customer Retention System — Final Year Project

Nov 2025 – July 2026

*Django • React • PostgreSQL • LightGBM • XGBoost*

- Built a full-stack multi-tenant platform helping SME e-commerce businesses identify and retain at-risk customers via automated RFM feature engineering and per-customer churn-risk scoring (HIGH / MEDIUM / LOW tiers).
- Trained and benchmarked LightGBM and XGBoost churn-prediction models on the UCI Online Retail benchmark dataset, and integrated the pipeline into the Django REST backend.

### Billing & Invoicing System — Client Project

Jan 2026 – Aug 2026

*React • Django REST Framework • PostgreSQL (Supabase) • Vercel*

- Designed and built a production-ready full-stack billing system for a small family-run business, covering quotations, invoicing, customer management, and payment tracking end-to-end, with one-click quote-to-invoice conversion.
- Implemented server-side PDF generation with one-click WhatsApp delivery and automated Google Drive archiving via OAuth 2.0, plus a dashboard with revenue trends and outstanding-payment reports.
- Built role-based access across three roles (admin, account manager, staff) and a bilingual EN/中文 interface; gathered requirements directly from the business owner and iterated through multiple UI revisions.

### Internal Recruitment Management System — Client Project

Apr 2026 – Present

*React • Vite • Django REST Framework • PostgreSQL • OpenCV • RapidOCR (ONNX)*

- Built an internal HR platform covering the full hiring lifecycle — tablet-based candidate intake, PIC review dashboard, offer letter and contract generation, e-signature, and onboarding — across multiple user roles.
- Engineered an automatic MyKad scanner: live card-edge detection and perspective correction with OpenCV in a Web Worker, focus/blur gating to reject unreadable frames, and neural OCR with custom field extraction that auto-fills candidate details.
- Implemented remote contract signing via tokenized emailed links with signature capture and server-side PDF generation, plus role-based access control and audit logging.

## Achievement

- **Best Presenter Award** — CITIC 2026, awarded for the “E-Commerce Customer Retention Management System Using RFM Features and Gradient-Boosted Churn Prediction” paper presentation (May 2026).

## TECHNICAL SKILLS

**Languages:** Python, Java, JavaScript, C++, SQL, HTML, CSS / SCSS, Liquid

**Testing & QA:** Manual Testing, Test Case Design, Selenium (Coursework – Verification & Validation)

**Frameworks & Libraries:** Django, React, Vite, Flask, Flutter, jQuery

**Machine Learning & Data:** XGBoost, LightGBM, scikit-learn, pandas, RFM segmentation.

**E-Commerce & Tools:** Shopify (Liquid, theme schema, sections, app integration), PostgreSQL, SQLite, MySQL, Git/GitHub, Figma, Postman
